

How do I remove Calmoseptine® Ointment?

Removal of Calmoseptine® Ointment from the skin:

It is not usually necessary to entirely remove Calmoseptine® Ointment from the skin. Any soiled areas can be cleansed of soil leaving a thin layer of ointment. More Calmoseptine® Ointment is then applied only where necessary. This minimizes trauma to the skin from friction during cleansing.

If it is necessary to thoroughly cleanse the ointment from the skin, Calmoseptine® Ointment can be removed by wiping with a clean dry cloth or gauze. Skin or wound cleansers with surfactants may also be used.

If skin is tender or fragile, or if stoma powder has been used and the ointment is crusted, patting or rubbing with oil (mineral, vegetable, or baby oil) will soften the ointment for easier removal. Any residual can then be removed with soap and water or a skin or wound cleanser.

From Clothing or objects:

For solid objects like floors, vinyl, wood, etc. use mineral or baby oil applied to a cotton ball, pat until the Calmoseptine® Ointment loosens enough to be removed with the cotton ball. Clean the oil.

For bedding & clothing, Clorox® 2 has been found to be useful.
