Kabrita goat milk-based formula is safe and supports healthy growth

Objective

Determine growth and safety parameters in newborns fed Kabrita goat milk-based formula

Method

Double-blind randomized controlled trial

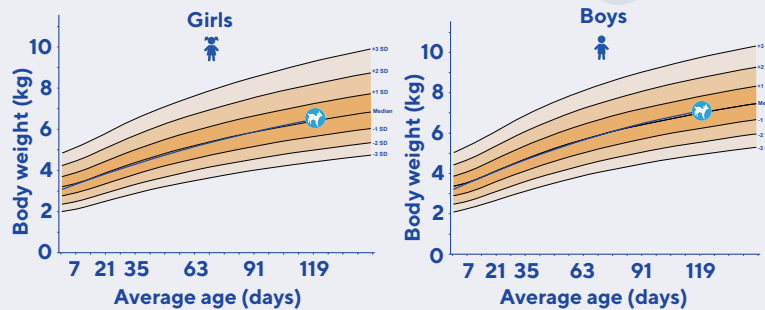

Healthy term boys and girls (n=304) recruited from 25 European study centers.

Conclusion

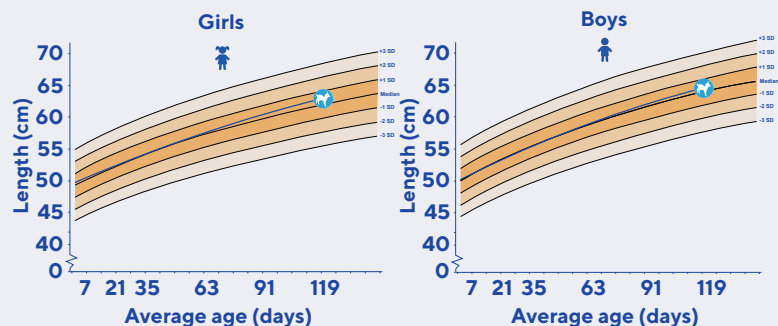

Our data demonstrate that Kabrita supports healthy growth, is well tolerated and is safe to use in infants from birth onwards.

Results: weight & length

Weight for age

Length for age

Results: safety and tolerability

Incidences of tolerability parameters and adverse events were similar between the GMF and CMF group.

Reflux

Flatulence

Colic

Fussiness

Good safety profile
